Problem One-Pager & Process Map

Day 1 · Fill this in as a pod, then draft your problem statement from it

POD / USE CASE	LOCATION	DATE
Quarterly Regulatory Filling	Mumbai	28/10/2026

How to use this sheet

1) Map the current state (Part 1). 2) Fill the canvas (Part 2). 3) Write the one sentence (Part 3), then carry it into your PRD.

1 Current-state process map

A workflow reads left to right: Inputs flow through the Steps your team performs to produce the Outputs someone relies on.

INPUTS — WHAT DATA / DOCUMENTS / SYSTEMS DOES THE WORK START FROM?

Multi-source data
RWA feeds (credit, market, op-risk)
Capital / HC-R source rows
Regulatory reportin

STEP 1 — FIRST THING A PERSON DOES

Pull & consolidate
Assemble source rows into the schedule cells (RC-R, HC-R⋯)

STEP 2 — NEXT STEP / CHECK

Run edit checks
Test each cell against the rules; trace filed value back to its source row

OUTPUT — WHAT IS PRODUCED, AND WHO CONSUMES IT?

Filed regulatory report
Regulator-facing capital filing — after mandatory human sign-off

Pain points · handoffs · manual effort

WHERE IT BREAKS

Where it breaks
A missed edit check or broken lineage = a material misstatement on a reported capita

HANDOFF

Handoff
Data owners preparers reviewer sign-off; each quarter, under deadline.

MANUAL EFFORT

Manual effort
Cell-by-cell edit checks and tracing every filed value to its source row, by hand.

2 Problem one-pager canvas

Read the six facts straight off your process map.

ROLE / WHO — THE PERSON, NOT THE DEPARTMENT

Regulatory reporting analysts who prepare the quarterly filing.

THE TASK — ONE WORKFLOW, NOT EVERYTHING THEY DO

Consolidate multi-source data into schedule cells, run edit checks, and trace each filed value to it

FREQUENCY & TIME / COST

Every quarter; ~N days of preparer + reviewer effort per cycle. (Confirm your real figure.)

THE PAIN — WHAT BREAKS, AND WHERE A WRONG ANSWER HURTS MOST

Manual, deadline-pressured checking; a missed check or broken trace becomes a material misstatement

ONE HARD CONSTRAINT — CONTROL, REGULATORY, TIMING, ACCESS	CURRENT TOOLS / SYSTEMS
A human must sign off before filing — AI may pre-validate and trace, but cannot autonomously file a	RWA and capital source feeds, the schedule/cell workbook, and the regulatory reporting instructions.

3 Problem-statement builder

Compress the canvas into one sentence. If you cannot fill every blank, the problem is not crisp enough yet.

WHO	SPENDS (TIME / COST)	ON (PAINFUL TASK)
Regulatory reporting analysts who prepare the quarterly filing.	Every quarter; ~N days of preparer + reviewer effort per cycle. (Confirm your real figure.)	Manual, deadline-pressured checking; a missed check or broken trace becomes a material misstatement

BECAUSE (WHY IT'S HARD)	AN AGENT COULD (WHAT IT DOES ON ITS OWN)
A human must sign off before filing — AI may pre-validate and trace, but cannot autonomously file a	could pre-run the edit checks and trace each filed value back to its source row — flagging failures

USING (WHICH SYSTEMS)	SAVING (THE VALUE)
RWA and capital source feeds, the schedule/cell workbook, and the regulatory reporting instructions.	cutting the check-and-trace effort to a focused review.

YOUR ONE-SENTENCE PROBLEM STATEMENT

Our regulatory reporting analysts spend ~N days each quarter checking and tracing the quarterly

Carry this into your PRD

Paste your finished sentence at the top of your PRD as the problem statement. Everything you build is measured against delivering that saving, for that person, without breaking that one hard constraint.
